## Why does Switzerland need SBB Green Class?

- There are 4.5 million cars in Switzerland, with a growth of 1 million in the last 10 years.
- Greenhouse gas emissions from cars have been growing constantly over the last 20 years.
- Cars are standing objects: Are in use only 300 hours per year, which is only 4% of the time!
- Car sharing is the long term solution, but today only around 0.1% of car journeys are made by a shared car.

# SBB Green Class as a Lifestyle of Sustainable and Multimodal Mobility.

- The Swiss are already multimodal today (for example, around 230 000 have a GA and car).
- Electromobility, P+Rail, public transport and last-mile sharing models as an ideal, additional combination.
- Mobility as a service per year for a fixed price from a single source.

# SBB Green Class Makes a Contribution to Climate Protection.

Our clients ...

- combine their trips increasingly with different forms of transport
- increase their number of train journeys (plus 11%)
- replace ICE car-trips (minus 39%) with their electric car.
- reduced their carbon footprint: each pilot-customer saved 1.5 tons of CO<sub>2</sub> per year; this corresponded to 20% of their annual mobility balance (2017).

Thank you.
